# NATIONAL INDUSTRIAL CHEMICALS NOTIFICATION AND ASSESSMENT SCHEME (NICNAS)

# POLYMER OF LOW CONCERN PUBLIC REPORT

# **Polymer in DESO Clear Coats**

This Assessment has been compiled in accordance with the provisions of the *Industrial Chemicals* (Notification and Assessment) Act 1989 (the Act) and Regulations. The National Industrial Chemicals Notification and Assessment Scheme (NICNAS) is administered by the Australian Government Department of Health, and conducts the risk assessment for public health and occupational health and safety. The assessment of environmental risk is conducted by the Australian Government Department of the Environment.

This Public Report is available for viewing and downloading from the NICNAS website or available on request, free of charge, by contacting NICNAS. For requests and enquiries please contact the NICNAS Administration Coordinator at:

Street Address: Level 7, 260 Elizabeth Street, SURRY HILLS NSW 2010, AUSTRALIA.

Postal Address: GPO Box 58, SYDNEY NSW 2001, AUSTRALIA.

BIBLIOGRAPHY	

# **SUMMARY**

The following details will be published in the NICNAS *Chemical Gazette*:

ASSESSMENT REFERENCE	APPLICANT(S)	CHEMICAL OR TRADE NAME	HAZARDOUS SUBSTANCE	INTRODUCTION VOLUME	USE
PLC/1320	PPG Industries Australia Pty Limited	Polymer in DESO Clear Coats	No	≤ 10 tonnes per annum	Component of aerospace coatings

# **CONCLUSIONS AND REGULATORY OBLIGATIONS**

#### **Human Health Risk Assessment**

Based on the assumed low hazard and the assessed use pattern, the notified polymer is not considered to pose an unreasonable risk to the health of workers and the public.

## **Environmental Risk Assessment**

Based on the assumed low hazard and the assessed use pattern, the notified polymer is not considered to pose an unreasonable risk to the environment.

## **Health and Safety Recommendations**

No specific engineering controls, work practices or personal protective equipment are required
for the safe use of the notified polymer itself; however, these should be selected on the basis of
all ingredients in the formulation, noting that the formulation as introduced may be classified
because of hazardous impurities.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the (M)SDS should be easily accessible to employees.
- Spray applications should be carried out in accordance with the Safe Work Australia Code of Practice for *Spray Painting and Powder Coating* (Safe Work Australia, 2015) or relevant State or Territory Code of Practice.
- If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the *Globally Harmonised System of Classification and Labelling of Chemicals (GHS)*, as adopted for industrial chemicals in Australia, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation should be in operation.

# Disposal

• Where reuse or recycling are not appropriate, dispose of the notified polymer in an environmentally sound manner in accordance with relevant Commonwealth, state, territory and local government legislation.

## Storage

• The following precautions should be taken by workers regarding storage of the notified polymer:

- Store in a segregated and approved area.
- Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (oxidising substances, strong acids, strong bases).

# **Emergency Procedures**

• Spills and/or accidental release of the notified polymer should be handled by physical containment, collection and subsequent safe disposal.

# **Secondary Notification**

This risk assessment is based on the information available at the time of notification. The Director may call for the reassessment of the polymer under secondary notification provisions based on changes in certain circumstances. Under Section 64 of the *Industrial Chemicals (Notification and Assessment) Act (1989)* the notifier, as well as any other importer or manufacturer of the notified polymer, have post-assessment regulatory obligations to notify NICNAS when any of these circumstances change. These obligations apply even when the notified polymer is listed on the Australian Inventory of Chemical Substances (AICS).

Therefore, the Director of NICNAS must be notified in writing within 28 days by the notifier, other importer or manufacturer:

- (1) Under Section 64(1) of the Act; if
  - the notified polymer is introduced in a chemical form that does not meet the PLC criteria.

or

- (2) Under Section 64(2) of the Act; if
  - the function or use of the notified polymer has changed from component of aerospace coatings, or is likely to change significantly;
  - the amount of notified polymer being introduced has increased, or is likely to increase, significantly;
  - the notified polymer has begun to be manufactured in Australia;
  - additional information has become available to the person as to an adverse effect of the notified polymer on occupational health and safety, public health, or the environment.

The Director will then decide whether a reassessment (i.e. a secondary notification and assessment) is required.

## (Material) Safety Data Sheet

The (M)SDS of the notified polymer and product containing the notified polymer were provided by the applicant. The accuracy of the information on the (M)SDS remains the responsibility of the applicant.

# **ASSESSMENT DETAILS**

#### 1. APPLICANT AND NOTIFICATION DETAILS

## **Applicants**

PPG Industries Australia Pty Limited (ABN: 82 055 500 939)

14–20 McNaughton Road CLAYTON VIC 3168

# **Exempt Information (Section 75 of the Act)**

Data items and details claimed exempt from publication: chemical name, other names, CAS number, molecular and structural formulae, molecular weight, polymer constituents, residual monomers/impurities and /import volume.

## **Notification in Other Countries**

The notified polymer was assessed under the Schedule 9 RRR criteria in Canada (2014)

## 2. IDENTITY OF POLYMER

# **Marketing Name(s)**

DESO Clear Coats (containing the notified polymer at < 50% concentration)

## **Molecular Weight**

Number Average Molecular Weight (Mn) is > 1,000 Da

## 3. PLC CRITERIA JUSTIFICATION

Criterion	Criterion met
Molecular Weight Requirements	Yes
Functional Group Equivalent Weight (FGEW) Requirements	Yes
Low Charge Density	Yes
Approved Elements Only	Yes
Stable Under Normal Conditions of Use	Yes
Not Water Absorbing	Yes
Not a Hazard Substance or Dangerous Good	Yes

The notified polymer meets the PLC criteria.

# 4. PHYSICAL AND CHEMICAL PROPERTIES

Appearance at 20 °C and 101.3 kPa Liquid
Melting Point/Glass Transition Temp
Density Liquid
Not available
1,136 kg/m³

Water Solubility Not available. Expected to be low based on molecular weight

and structure.

Dissociation Constant Not determined. The notified polymer does not contain any

functional groups that are expected to dissociate in water.

Reactivity Stable under normal environmental conditions.

Degradation Products Incomplete combustion may result in oxides of carbon.

## 5. INTRODUCTION AND USE INFORMATION

# Maximum Introduction Volume of Notified Chemical (100%) Over Next 5 Years

Year	1	2	3	4	5
Tonnes	< 10	< 10	< 10	< 10	< 10

#### Use

The notified polymer will not be manufactured in Australia and will be imported as a component of coatings (at a concentration of < 50%) for use in the aerospace industry. The coatings containing the notified polymer will be shipped in steel 55-gal (208 L) drums and repackaged into 1 gallon (~3.8 L) containers, pails and totes for distribution to industrial customers. No reformulation of the notified polymer or the paint containing the notified polymer will occur in Australia.

The coatings containing the notified polymer (at < 50% concentration) will be applied to aircraft parts by trained personnel under controlled conditions in industrial settings. The coating containing the notified polymer will be predominantly applied by spray (either through robotics or worker-operated spray guns) and may also be applied using brushes and rollers where use of a spray booth is not practical.

#### 6. HUMAN HEALTH RISK ASSESSMENT

No toxicological data were submitted. The notified polymer meets the PLC criteria and is therefore assumed to be of low hazard.

Although not considered in this risk assessment, NICNAS notes that the notified polymer contains residual monomers that are classified as hazardous according to the *Globally Harmonised System of Classification and Labelling of Chemicals (GHS)*, as adopted for industrial chemicals in Australia. These are not present in the notified polymer, as introduced, above the cut off concentration for classification.

The risk of the notified polymer to occupational and public health is not considered to be unreasonable given the assumed low hazard and the assessed use pattern.
